

IBRAHIM ALSAEDI

Melbourne, VIC | ibrahim.a.alsaedi@gmail.com | linkedin.com/in/ibrahim-alsaedi

SUMMARY

Master of Data Science student at the University of Melbourne, graduating December 2026, seeking data science and machine learning internships and graduate roles. Skilled in statistical modelling, model interpretability (SHAP) and agentic LLM/RAG systems, with a record of turning complex data into clear, actionable reports.

EDUCATION

Master of Data Science <i>The University of Melbourne</i>	Mar 2025 – Dec 2026 (expected)
Bachelor of Computer Science <i>Taif University</i>	Sep 2019 – Aug 2024

EXPERIENCE

Data Science Capstone (Industry Partner: Biosignals Diagnostics) <i>The University of Melbourne · team of 5</i>	Mar 2026 – Present
- Analyse device noise patterns across 3,000+ biosignal recordings (30 seconds each) and develop ML models to classify noise types, supporting more reliable diagnostic reporting - Build and maintain a structured noise taxonomy to improve diagnostic signal quality and reliability - Carry out exploratory data analysis of the ECG signals and build the ML movement-noise classifier, currently at 95% accuracy	
Founding Engineer, Whitakr <i>Early-stage startup, Melbourne · AI-powered medico-legal document analysis · whitakr-base.web.app</i>	Apr 2026 – Jul 2026
- Designed the agentic architecture generating structured legal chronologies from bundles of medical records: per-document relevance scoring, cross-document linking, timeline-gap detection and missing-record flags - Built the RAG pipeline and LLM integration, orchestrating Claude models across multi-step document-analysis workflows - Delivered a working end-to-end demo to a prospective law-firm client: a full case chronology in ~20 minutes of wall time, an estimated 80% reduction in manual paralegal effort	

RELEVANT PROJECT WORK

SHD Risk Prediction from ECG Data	Jul 2025 – Nov 2025
- Built CNN-GRU and tree-based models (TensorFlow, PyTorch) to predict structural heart disease from ECG data - Applied SHAP and Brier scores for model transparency and explainability, supporting responsible, clinically interpretable reporting of results	
Statistical Machine Learning Report: UCI Bank Marketing Data	Jul 2025 – Nov 2025
- Applied ML models including TabNet to predict term-deposit subscriptions - Distilled complex model evaluations into a clear, actionable performance report	
Australia's Sentiment on the Cost of Living Crisis	Mar 2025 – May 2025
- Developed a cloud-based NLP pipeline analysing public sentiment trends (Python, API integration) - Deployed end-to-end on AWS with GitLab version control	

TECHNICAL SKILLS

Languages & Frameworks: Python, R, SQL, TensorFlow, PyTorch, TabNet
Machine Learning & AI: deep learning, NLP, agentic LLM systems, RAG pipelines, LLM orchestration, model interpretability (SHAP)
Data Analysis: statistical modelling, data visualisation, preprocessing, feature engineering
Cloud & Tools: AWS, AWS IAM, Git/GitHub/GitLab, API integration, Jupyter
Spoken Languages: Arabic (native), English (fluent)

CERTIFICATIONS

AWS Certified Developer – Associate (Feb 2023 – Feb 2026)

EXTRA-CURRICULAR

- Lebanese Students' Society UniMelb,** Events Lead: planned and ran an event for 120+ attendees
- Soil and Plant Club:** coordinated field trips
- Sacred Heart Mission:** co-managed operations of a charity op shop
- Reading Out of Poverty:** organised and maintained second-hand library collections
